

In the Claims:

1 **1.** (original) A gear with two turntables (1, 3) arranged into
2 one another, which are interconnected via a swashplate (2),
3 wherein the swashplate (2) is connected with the first
4 turntable (1) via at least one pin (2.2), and wherein the
5 swashplate (2) is connected with the second turntable (2)
6 via gear rings (2.1, 3.1).

1 **2.** (original) A gear according to claim 1, wherein the at
2 least one pin (2.2) is produced in one piece with the
3 swashplate (2) or with the first turntable (1).

1 **3.** (original) A gear according to claim 1, wherein the at
2 least one pin (2.2) is connected with the swashplate (2) or
3 with the first turntable (1) by gluing and/or welding
4 and/or force fitting and/or soldering and/or screwing in.

Claims 4 to 10 (canceled).

1 **11.** (new) A gear according to claim 1, wherein the at least one
2 pin (2.2) formed at the swashplate (2) or at the first
3 turntable (1) is arranged in a slot-shaped recess (1.1) in
4 the first turntable (1) or the swashplate (2).

- 1 **12.** (new) A gear according to claim 11, wherein the pin (2.2)
2 and the slot-shaped recess (1.1) form a sliding pairing,
3 and wherein a bushing made of a material capable of sliding
4 is arranged as a counter bearing on the pin (2.2) and/or
5 into the slot-shaped recess (1.1).
- 1 **13.** (new) A gear according to claim 12, wherein the bushing is
2 made of teflon or gray iron or brass or bronze.
- 1 **14.** (new) A gear according to claim 12, wherein the bushing set
2 as a counter bearing onto the pin (2.2) and/or into the
3 slot-shaped recess (1.1) is provided for compensating
4 process tolerances.
- 1 **15.** (new) A gear according to claim 1, wherein a lubricant
2 supply is provided for the connection between the
3 swashplate (2) and the two turntables (1, 3).
- 1 **16.** (new) A gear according to claim 1, wherein the first
2 turntable (1) is the outer one of the two turntables
3 arranged into one another and wherein the second turntable
4 (3) is the inner one of the two turntables arranged into
5 one another.
- 1 **17.** (new) A gear according to claim 1, wherein the first
2 turntable is formed as a camshaft gear (1) of an internal
3 combustion engine, which camshaft gear is connected with a
4 crankshaft, and wherein the second turntable (3) is

5 connected with a camshaft (4) of the internal combustion
6 engine, and wherein the gear is formed for adjusting the
7 angle of rotation of the camshaft (4) relative to the angle
8 of rotation of the crankshaft.
